one of the attractions of fuzzy logic is its utility in solving many real engineering problems as many have realised the major obstacles in building a real intelligent machine involve dealing with random disturbances processing large amounts of imprecise data interacting with a dynamically changing environment and coping with uncertainty neural fuzzy techniques help one to solve many of these problems fuzzy logic and intelligent systems reflects the most recent developments in neural networks and fuzzy logic and their application in intelligent systems in addition the balance between theoretical work and applications makes the book suitable for both researchers and engineers as well as for graduate students

all algebras in a very large axiomatically defined class of quantum nilpotent algebras are proved to possess quantum cluster algebra structures under mild conditions furthermore it is shown that these quantum cluster algebras always equal the corresponding upper quantum cluster algebras previous approaches to these problems for the construction of quantum cluster algebra structures on quantized coordinate rings arising in lie theory were done on a case by case basis relying on the combinatorics of each concrete family the results of the paper have a broad range of applications to these problems including the construction of quantum cluster algebra structures on quantum unipotent groups and quantum double bruhat cells the berenstein zelevinsky conjecture and treat these problems from a unified perspective all such applications also establish equality between the constructed quantum cluster algebras and their upper counterparts
