this text stems from a course i have taught a number of times attended by students of material science electrical engineering physics chemistry physical chemistry and applied mathematics it is intended as an introductory discourse to give the reader a first encounter with group theory the work concentrates on point and space groups as these groups have the principal application in technology here is an outline of the salient features of the chapters in chapter 1 basic notions and definitions are introduced including that of abelian groups cyclic groups sylow's theorems lagrange's subgroup theorem and the rearrangement theorem in chapter 2 the concepts of classes and direct products are discussed applications of point groups to the platonic solids and non regular dual polyhedra are described in chapter 3 matrix representation of operators are

introduced leading to the notion of irreducible representations irreps the great orthogonality theorem is also introduced followed by six important rules relating to dimensions of irreps Schur's lemma and character tables are described applications to quantum mechanics are discussed in chapter 4 including descriptions of the rotation groups in two and three dimensions the symmetric group Cayley's theorem and Young diagrams the relation of degeneracy of a quantum state of a system to dimensions of irreps of the group of symmetries of the system are discussed as well as the basis properties of related eigenfunctions

The fourth edition of Design of Structural Elements: Concrete, Steelwork, Masonry and Timber Designs to Eurocodes is a concise single volume introduction to the design of structural elements in concrete, steel, timber, masonry and composites. It provides design principles and guidance in line with Eurocodes current as of 2021. Topics include the philosophy of design, sustainable development, basic structural concepts and material properties. After an overview of structural design, the book contains self-contained chapters with numerous diagrams and worked examples on design in reinforced concrete, structural steelwork and steel-concrete composites, masonry and timber based on EN 1990, 1997. Selected extracts from these publications assist familiarity. Elements considered cover reinforced concrete and composite floors, isolated foundation, cantilever retaining wall, load bearing and panel walls, stud wall and connections. The text is ideal for student civil and structural engineers on degree and diploma courses and also practising civil and structural engineers and other built environment professions. The online support materials for adopting course instructors includes an extensive set of solutions to the problems in the book and powerpoint slides for use in lectures. Routledge.com 9781032076317
