this book presents several robust sliding mode protocols for achieving the formation and tracking of quadcopter swarm for a given pattern in entire book the concept of

leader follower formation control of a multi agent system is exploited for deriving the protocols and the graph theory is used to represent the communication between the quadcopters the book covers two types of formation protocols of the quadcopter swarm namely continuous time sliding mode protocols and discrete time sliding mode protocols first the continuous time higher order sliding mode protocols using super twisting algorithm are designed for formation using linear and non linear models of quadcopter then the discrete time sliding mode protocols using power rate reaching law discrete time super twisting algorithm and exponential reaching law are presented the protocols are thoroughly analysed for robustness chattering control effort and convergence time for achieving the formation also the stability conditions using the lyapunov function are derived to ensure the stability of the swarm with each protocol further each chapter includes extensive simulation and comparative studies to show the efficacy of each protocol the book will be useful to graduate students research scholars and professionals working in the domain of civilian and military usage of the drone technology
