this book constitutes the proceedings of the 14th international conference on relational and algebraic methods in computer science ramics 2014 held in marienstatt germany in april may 2014 the 25 revised full papers presented were carefully selected from 37 submissions the papers are structured in specific fields on concurrent kleene algebras and related formalisms reasoning about computations and programs heterogeneous and categorical approaches applications of relational and algebraic methods and developments related to modal logics and lattices

aimed at an audience of researchers and graduate students in computational geometry and algorithm design this book uses the geometric spanner network problem to showcase a number of useful algorithmic techniques data structure strategies and geometric analysis techniques with many applications practical and theoretical the authors present rigorous descriptions of the main algorithms and their analyses for different variations of the geometric spanner network problem though the basic ideas behind most of these algorithms are intuitive very few are easy to describe and analyze for most of the algorithms nontrivial data structures need to be designed and nontrivial techniques need to be developed in order for analysis to take place still there are several basic principles and results that are used throughout the book one of the most important is the powerful well separated pair decomposition this decomposition is used as a starting point for several of the spanner constructions
