fire and combustion presents a significant engineering challenge to mechanical civil and dedicated fire engineers as well as specialists in the process and chemical safety buildings and structural fields we are reminded of the tragic outcomes of untenable fire disasters such as at king s cross underground station or switzerland s st gotthard tunnel in these and many other cases computational fluid dynamics cfd is at the forefront of active research into unravelling the probable causes of fires and helping to design structures and systems to ensure that they are less likely in the future computational fluid dynamics cfd is routinely used as an analysis tool in fire and combustion engineering as it possesses the ability to handle the complex geometries and characteristics of combustion and fire this book shows engineering students and professionals how to understand and use this powerful tool in the study of combustion processes and in the engineering of safer or more fire resistant or conversely more fire efficient

structures no other book is dedicated to computer based fire dynamics tools and systems it is supported by a rigorous pedagogy including worked examples to illustrate the capabilities of different models an introduction to the essential aspects of fire physics examination and self test exercises fully worked solutions and a suite of accompanying software for use in industry standard modeling systems computational fluid dynamics cfd is widely used in engineering analysis this is the only book dedicated to cfd modeling analysis in fire and combustion engineering strong pedagogic features mean this book can be used as a text for graduate level mechanical civil structural and fire engineering courses while its coverage of the latest techniques and industry standard software make it an important reference for researchers and professional engineers in the mechanical and structural sectors and by fire engineers safety consultants and regulators strong author team cuhk is a recognized centre of excellence in fire eng deliver an expert package for students and professionals showing both theory and applications accompanied by cfd modeling code and ready to use simulations to run in industry standard ansys cfx and fluent software

this monograph compiles the contemporary knowledge about d norms and provides an introductory tour through the essentials of multivariate extreme value theory following a clear introduction of d norms this book introduces links with the theory through multivariate generalized pareto distributions and max stable distributions further views on d norms from a functional analysis perspective and from stochastic geometry underline the aim of this book to reveal mathematical structures this book is intended for mathematicians with a basic knowledge of analysis and probability theory including fubini s theorem

this is a revised and expanded edition of a successful graduate and reference text the book is designed for a standard graduate course on probability theory including some important applications the new edition offers a detailed treatment of the core area of probability and both structural and limit results are presented in detail compared to the first edition the material and presentation are better highlighted each chapter is improved and updated

environmental concerns regarding continuous use of synthetic dyes saw a revival in the demand for natural dyes as natural dyes exhibit better biodegradability and generally have a higher compatibility with the environment however one of the limitations on the use of natural dyes or pigments is the low extraction yield factors a few grams of pigment per kg of dried raw material therefore the exploitation of other biological sources such as fungi bacteria and cell cultures offers interesting alternative microbial pigments such as from bacterial origins offer the advantage in terms of production compared to pigments extracted from vegetables or animals due to its simple cell and fast culturing technique this book offers interesting insight into initial works carried out to demonstrate the potential use of bacterial pigment as colorant for various applications
