a complete guidebook on biofilm study has emphasized the biofilm related issues in the present context related to research and development for this purpose experimental design and relevant experimental protocols for the biofilm studies have been highlighted here in addition to that inhibitors from natural or synthetic sources against microbial biofilm development have been addressed this approach has been further substantiated by bioinformatics as well as nanotechnology based reports both the image processing related to biofilm study and the characters of substratum associated with biofilm development have also been included for a better understanding of the beginners in this field further how biofilm helps and or hampers in food processing and waste management system that discussion has been considered in this book similarly human benefits from biofilm and reverse of it have also been included considering host pathogen interaction immunity aspects and others carrying huge resources information ideas in a compiled manner for biofilm study work has highlighted how biofilm related experiment has to be designed based on protocols this book has focused majorly about biofilm related gene regulation along with the development of different inhibitors for therapeutic aspects this paradigm has been further discussed based on the nanotechnology and bioinformatics approach biofilm studies related to waste management food processing and image processing which are newly upcoming have been emphasized in this book

spatial presence is a state in which media users temporarily overlook the mediated nature of their experience this study discusses stimulus dependent structure in spontaneous eye blink behavior as an alternative to presence selfreport measures to this end theories and empirical evidence on presence spontaneous eye blink behavior and existing approaches for presence assessment are used to link antecedent processes of presence especially attention to presence and structure in blinking behavior three experiments in different media environments relate three different methods for quantification of stimulus dependent structure to an established presence scale the results are not conclusive but raise questions on presence and its measurement and advance the understanding of stimulus dependent structure in spontaneous eye blink behavior

human retroviruses hiv and htlv have been recognized as important pathogens because of their association with lethal diseases such as aids and atl considerable resources and efforts have been directed at understanding the interaction between these retroviruses and their host which may provide clues as to how the infection can be controlled or prevented among the key scientific successes is the identification of intracellular restriction factors that have evolved as obstacles to the replication of pathogens including infectious retroviruses the discovery of apobec which are strong mutagens of retroviral genomes and intracellular retroelements began a new era of intense research activities into the spectrum of intrinsic anti hiv activity leading to the identification of trim5a bst2 tetherin and samhd1 in response hiv has evolved several accessory genes as weaponries to evade these intracellular restriction activities the intracellular antiretroviral defenses evolved in response to endogenous retroelements that make up more than 40 of the entire mammalian genome and which are regarded as ancestors of infectious retroviruses ltr type retroelements are present in all higher eukaryotes representing about 8 of the human genome non ltr retroelements can be found at extremely high copy numbers also with a significant portion of mammalian genomes consisting of lines mammalian genomes are modified by lines through insertions but also by the indirect replication of non autonomous retrotransposons such as sines lines insertion was shown to have played and continue to play important roles in genomic evolution and somatic genome mosaicism mediated physiology and because retrotransposition can confer genetic diversity that is beneficial to the host the vertebrate intrinsic immunity has evolved to support a balance between retroelement insertions that confer beneficial and those that cause deleterious gene disruptions the articles published in this research topic should serve not only as valuable references for the field but provide future topics of research for investigators that should further our understanding of the retrovirus retroelements and their restrictions
