this book is dedicated to victor emmanuilovich katsnelson on the occasion of his 75th birthday and celebrates his broad mathematical interests and contributions victor emmanuilovich s mathematical career has been based mainly at the kharkov university and the weizmann institute however it also included a one year guest professorship at leipzig university in 1991 which led to him establishing close research contacts with the schur analysis group in leipzig a collaboration that still continues today reflecting these three periods in victor emmanuilovich s career present and former colleagues have contributed to this book with research inspired by him and presentations on their joint work contributions include papers in function theory favorov golinskii friedland goldman yomdin kheifets yuditskii schur analysis moment problems and related topics boiko dubovoy dyukarev fritzsche kirstein mädler extension of linear operators and linear relations dijksma langer hassi de snoo hassi wietsma and non commutative analysis ball bolotnikov cho jorgensen

for propositional logic it can be decided whether a formula has a deduction from a finite set of other formulas this volume begins with a method to decide this for the quantified formulas of those fragments of arithmetic which express the properties of order plus successor and of order plus addition pressburger arithmetic it makes use of an algorithm eliminating quantifiers which in turn is also applied to obtain consistency proofs for these fragments

a storm tracking algorithm designed to detect and track fine structure in digitized radar data is evaluated these fine structures are defined by regions containing values within 3 db of peaks in reflectivity factor the algorithm describes storm structure and evolution by correlating these peak regions in time and space the evaluation consists of a comparison of the algorithm output with raw data and with output from an afgl algorithm which detects and tracks three dimensional reflectivity weighted centroids defined by a preselected threshold it is concluded that the algorithm cannot reliably detect and track significant structures within storms

when applied to data sets with a temporal resolution of approx 6 min and a spatial resolution of 1 0 deg in azimuth and 0 7 deg in elevation the significance of tracking 3 db peaks is questioned and the implication of defining a larger peak threshold is discussed the algorithm does track the large features of storms with results similar to the afgl algorithm however it does not run in real time and is not modular unlike the afgl algorithm
