the problem of finding minimal surfaces i e of finding the surface of least area among those bounded by a given curve was one of the first considered

after the foundation of the calculus of variations and is one which received a satisfactory solution only in recent years called the problem of plateau after the blind physicist who did beautiful experiments with soap films and bubbles it has resisted the efforts of many mathematicians for more than a century it was only in the thirties that a solution was given to the problem of plateau in 3 dimensional euclidean space with the papers of douglas dj and rado r t l 2 the methods of douglas and rado were developed and extended in 3 dimensions by several authors but none of the results was shown to hold even for minimal hypersurfaces in higher dimension let alone surfaces of higher dimension and codimension it was not until thirty years later that the problem of plateau was successfully attacked in its full generality by several authors using measure theoretic methods in particular see de giorgi dg1 2 4 5 reifenberg re federer and fleming ff and almgren af1 2 federer and fleming defined a k dimensional surface in \mathbb{R}^n as a k current i e a continuous linear functional on k forms their method is treated in full detail in the splendid book of federer fh 1

this book is the tenth in a series of volumes whose aim is to provide a complete proof of the classification theorem for the finite simple groups based on a fairly short and clearly enumerated set of background results specifically this book completes our identification of the simple groups of bicharacteristic type begun in the ninth volume of the series see surv 40 9 this is a fascinating set of simple groups which have properties in common with matrix groups or more generally groups of lie type defined both over fields of characteristic 2 and over fields of characteristic 3 this set includes 11 of the celebrated 26 sporadic simple groups along with several of their large simple subgroups together with surv 40 9 this volume provides the first unified treatment of this class of simple groups

the unified small disturbance equations are numerically solved using the well known lax wendroff finite difference technique the method allows complete determination of the inviscid flow field and surface properties as long as the flow remains supersonic shock waves and other discontinuities are accounted for implicitly in the numerical method this technique was programmed for
