wind power capacity in the world has been increased by more than 30 over the last decade in countries which have prominent installations wind energy conversion systems weccs based on the doubly fed induction generator dfig have dominated the wind power generation sector due to the outstanding advantages they provide including small converter ratings around 30 of the generator rating and lower converter costs due to the non linearity of wind power systems the dfig power control setup presents a big challenge especially under conditions of high variance in wind speed and parameter sensing to overcome these major problems an improved idpc indirect power control system based on pid proportional integral derivative controller has been proposed instead of the conventional power inverters this handbook covers information about idpc based wecs the book starts with a general introduction to wind power system basics subsequent chapters provide additional knowledge about robustness tests and adaptive intelligent control systems employed in wind energy systems the new concept of direct and quadrature current control ird irq under mppt maximum power point tracking strategy is also explained along with novel fuzzy logic type control systems the authors have included detailed diagrams and an appendix of wecs parameters making this handbook a useful primer for engineering students working towards completing licenses masters degrees and post graduation programs in advanced wind power energy systems

the physical principles of water hammer are explained in this volume the basic mathematical methods of solution of water hammer and ways of limiting its effects are covered detailed description is given of the method of characteristics and the corresponding programs for personal computers which enables solution of water hammer in a wide variety of hydraulic systems encountered in practice examples are given of solution of water hammer of common pipe line systems as well as calculation of the steady state of flow the determination of discharge through a pipe line measurements of characteristics of valves pumps turbines determination of the operating régime of a valve in order to ensure a desired pressure and discharge curve etc this book will be of interest to those civil mechanical and petroleum engineers dealing with the design and operation of hydraulic systems

the idea of a symposium devoted to the contemporary knowledge of the world of copernicus the planetary system to commemorate the 500th

anniversary of his birth came during the xiv general assembly of iau in brighton the executive committee has approved it in the program of the extraordinary copernicus general assembly of iau in poland in 1973 the iau symposium no 65 copernicus symposium iv on the exploration of the planetary system was held in copernicus native town torun poland from 5th to 8th september 1973 under the auspices of commissions 16 physical study of planets and satellites and 40 radio astronomy and the co sponsorship of cospar there were about 140 invited participants from 29 countries and about the same number of other participants to the extraordinary general assembly of iau who came to torun to attend the sessions of this symposium special funds of the polish academy of sciences made possible the participation of several young astronomers in this meeting we are very grateful to professor p swings the director of the astrophysical institute of the university of liege belgium for accepting the task of chairing this symposium his expert and enthusiastic guidance helped us constantly in the preparation the efforts of the members of the scientific organizing committee are also very much appreciated special thanks are due to professors a dollfus and t owen

memristors have provided a new direction of thinking for circuit designers to overcome the limits of scalability and for thinking of building systems beyond moore's law over the last decade there has been a significant number of innovations in using memristors for building neural networks through analog computing in memory computing and stochastic computing approaches the emergence of intelligent integrated circuits is inevitable for the future of integrated circuit applications this book provides a collection of talks conducted as part of the ieee seasonal school on circuits and system having a focus on intelligence in chip tomorrow of integrated circuits technical topics discussed in the book include edge of chaos theory explains complex phenomena in memristor circuits analog memristive computing designing energy efficient neo cortex system with on device learning integrated sensors challenges and recent advances in nvm based neuromorphic computing ics in memory computing for deep learning deep learning with spiking neural networks computational intelligence for designing integrated circuits and systems neurochip design modeling and applications

analysis assessment and data management are core competencies for operation research analysts this volume addresses a number of issues and developed methods for improving those skills it is an outgrowth of a conference held in april 2013 at the hellenic military academy and brings together a broad variety of mathematical methods and theories with several applications it discusses directions and pursuits of scientists that pertain to engineering sciences it also presents the theoretical background required for algorithms and techniques applied to a large variety of

concrete problems a number of open questions as well as new future areas are also highlighted this book will appeal to operations research analysts engineers community decision makers academics the military community practitioners sharing the current state of the art and analysts from coalition partners topics covered include operations research games and control theory computational number theory and information security scientific computing and applications statistical modeling and applications systems of monitoring and spatial analysis

the operation of the mark iv core fueled entirely with metallic plutonium introduces a variety of problems which must be scrutinized prior to full power operation although many of the problems are of a conventional nature others are complicated by physical chemical and neutronic properties peculiar to plutonium the low melting point of the fuel the tendency to deform under stress its toxicity and the small values for the delayed neutron fraction constitute sources of potential hazard not encountered in uranium fueled reactors the evaluation of these along with other potential hazards shared in common with conventional uranium loadings constitutes the subject of this report

the trucluster server handbook authoritatively details how to plan design install configure and administer a cluster of tru64 unix systems the book explains how to configure and optimize hardware underlying a trucluster server including storage servers so critical to running a high end cluster operation this book provides best practices and techniques drawn from the authors extensive experiences in the field with systems designers systems managers developers and users the authors include a former tru64 unix technical group leader with hp s consulting division and a top industry figure and two former trucluster server team leaders with the customer support center
