this self contained text will appeal to readers from diverse fields and varying backgrounds topics include 1st order recursive arithmetic 1st and 2nd order logic and the arithmetization of syntax numerous exercises some solutions 1969 edition

for the first time the discipline of modern inorganic chemistry has been systematized according to a plan constructed by a council of editorial advisors and consultants among them three nobel laureates e o fischer h taube and g wilkinson rather than producing a collection of unrelated review articles the series creates a framework which reflects the creative potential of this scientific discipline thus it stimulates future development by identifying areas which are fruitful for further research the work is indexed in a unique way by a structured system which maximizes its usefulness to the reader it augments the organization of the work by providing additional routes of access for specific compounds reactions and other topics

the prime goal of this monograph which comprises a total of five volumes is to derive sharp spectral asymptotics for broad classes of partial differential operators using techniques from semiclassical microlocal analysis in particular propagation of singularities and to subsequently use the variational estimates in small domains to consider domains with singularities of different kinds in turn the general theory results and methods developed is applied to the magnetic schrödinger operator miscellaneous problems and multiparticle quantum theory in this volume the general microlocal semiclassical approach is developed and microlocal and local semiclassical spectral asymptotics are derived

the authors consider the fundamental solution to the wave equation on a manifold with corners of arbitrary codimension if the initial pole of the solution is appropriately situated the authors show that the singularities which are diffracted by the corners i e loosely speaking are not propagating along limits of transversely reflected rays are smoother than the main singularities of the solution more generally the authors show that subject to a hypothesis of nonfocusing diffracted wavefronts of any solution to the wave equation are smoother than the incident singularities these results extend the authors previous work on edge manifolds to a situation where the fibers of the boundary fibration obtained here by blowup of the corner in question are themselves manifolds with corners
