this volume presents self contained survey articles on modern research areas written by experts in their fields the topics are located at the interface of spectral theory theory of partial differential operators stochastic analysis and mathematical physics the articles are accessible to graduate students and researches from other fields of mathematics or physics while also being of value to experts as they report on the state of the art in the respective fields

many results both from semi group theory itself and from the applied sciences are phrased in discipline specific languages and hence are hardly known to a broader community this volume contains a selection of lectures presented at a conference that was organised as a forum for all mathematicians using semi group theory to learn what is happening outside their own field of research the collection will help to establish a number of new links between various sub disciplines of semigroup theory stochastic processes differential equations and the applied

fields the theory of semigroups of operators is a well developed branch of functional analysis its foundations were laid at the beginning of the 20th century while the fundamental generation theorem of hille and yosida dates back to the forties the theory was from the very beginning designed as a universal language for partial differential equations and stochastic processes but at the same time it started to live as an independent branch of operator theory nowadays it still has the same distinctive flavour it develops rapidly by posing new internal questions and in answering them discovering new methods that can be used in applications on the other hand it is influenced by questions from pdes and stochastic processes as well as from applied sciences such as mathematical biology and optimal control and thus it continually gathers a new momentum researchers and postgraduate students working in operator theory partial differential equations probability and stochastic processes analytical methods in biology and other natural sciences optimization and optimal control will find this volume useful

this is the second of two volumes containing peer reviewed research and survey papers based on talks at the international conference on modern analysis and applications the papers describe the contemporary development of subjects influenced by mark krein

the objective of this self contained book is two fold first the reader is introduced to the modelling and mathematical analysis used in fluid mechanics especially concerning the navier stokes equations which is the basic model for the flow of incompressible viscous fluids authors introduce mathematical tools so that the reader is able to use them for studying many other kinds of partial differential equations in particular nonlinear evolution problems the background needed are basic results in calculus integration and functional analysis some sections certainly contain more advanced topics than others nevertheless the authors aim is that graduate or phd students as well as researchers who are not specialized in nonlinear analysis or in mathematical fluid mechanics can find a detailed introduction to this subject

in july 2009 germany hosted the 50th international mathematical olympiad imo for the very first time the number of participating countries exceeded 100 with 104 countries from all continents celebrating the 50th anniversary of the imo provides an ideal opportunity to look back over the past five decades and to review its development to become a worldwide event this book is a report about the 50th imo as well as the imo history a lot of data about all the 50 imos are included we list the most successful contestants the results of the 50 olympiads and the 112 countries that have ever taken part it is impressive to see that many of the world s leading research mathematicians were among the most successful imo participants in their youth six of them gave presentations at a special celebration bollob?s gowers lov?sz smirnov tao and yoccoz this book is aimed at students in the imo age group and all those who have interest in this worldwide leading competition for highschool students
