if a fundamental goal of schooling is to prepare young people for the unknowable future why do we assign students so many clearly defined tasks with predetermined solutions according to educator and creativity expert ronald a beghetto the best way to unleash students problem solving and creativity and thus prepare them to face real world problems is to incorporate complex challenges that teach students to respond productively to uncertainty in this thought provoking book beghetto explains how to foster possibility thinking to help students open up their thinking in creative sometimes counterintuitive ways the process of lesson unplanning a way of transforming existing lessons activities and assignments into more complex classroom challenges four basic action principles that teachers and students can use to design and solve complex challenges both inside and outside the classroom the steps for creating legacy challenges which require students to identify a problem develop a solution and ensure that their work makes a lasting contribution with planning forms and detailed sample activities this practical guide will enable teachers at every grade level to design a full range of challenges in any subject area invite uncertainty into your classroom and discover what your students are capable of

one of the goals of artificial intelligence ai is creating autonomous agents that must make decisions based on uncertain and incomplete information the goal is to design rational agents that must take the best action given the information available and their goals decision theory models for applications in artificial intelligence concepts and solutions provides an introduction to different types of decision theory techniques including mdps pomdps influence diagrams and reinforcement learning and illustrates their application in artificial intelligence this book provides insights into the advantages and challenges of using decision theory models for developing intelligent systems

physics education research is a young field with a strong tradition in many countries however it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of physics in contemporary society for different levels and populations this may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice on the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy the topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning physics with some reflections on the physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment and cultural aspects information is also given on the organizations involved in connecting various aspects of physics education the international commission on physics education the european physical society and the european physics education network

according to john dewey seymour papert donald schon and allan collins school activities to be authentic need to share

key features with those worlds about which they teach this book documents learning and teaching in open inquiry learning environments designed with the precepts of these educational thinkers in mind the book is thus a first hand report of knowing and learning by individuals and groups in complex open inquiry learning environments in science as such it contributes to the emerging literature in this field secondly it exemplifies research methods for studying such complex learning environments the reader is thus encouraged not only to take the research findings as such but to reflect on the process of arriving at these findings finally the book is also an example of knowledge constructed by a teacher researcher and thus a model for teacher researcher activity

this is an open access book in this industrial era 4 0 society encounters significant environmental economic and social challenges thus educational institutions need to ensure that all students are well prepared for the future and that they can act as agents of change as a result educational institution must expand their educational system extensively to address these challenges including reshaping teaching and learning notions and platforms that immensely focus on not only developing a broad set of academic staff and student s knowledge skills attitudes and values but also upholding the fast growing technology building strong learning connections should be perceived as the highest priority in educational institutions the connection paves the way for critical thinking and it is a fundamental concept that connects both context and relevance in this digital information age technology has enormous potential to assist this whole process of connection the 5th international conference of current issues in education iccie 2023 provides platforms for researchers and practitioners to share their ideas and experiences concerning these issues the conference also brings an excellent opportunity to connect with global participants and enhance further collaborations
