this extensively revised and fully updated second edition is designed as a textbook for m a
education m ed m a psychology and sociology and for research students pursuing courses in
statistics related to these subjects it takes into account the present syllabi of various
universities and institutes of education across the country what s new to the second edition six
new chapters added with empha sis on advanced statistical concepts and techniques such as the
following biserial correlation point biserial correlation tetrachoric correlation phi coefficient
partial and multiple correlation transfer of raw scores into standard scores t c and stanine
scores non parametric tests like the mcnemar test sign test wilcoxon test median test u test
runs test and ks test analysis of covariance some chapters modified and reshuffled to reflect the

new emphasis entire text thoroughly checked and marked improvements made to bring the topics upto date

the book has been written as per the syllabus prescribed by gh raisoni college of engineering rtmnu nagpur for the first semester of engineering chemistry students the book has been developed in view of the recent development of the subject the book covers important topics such as water treatment fuel and combustion lubricants portland cement corrosion polymers cristal structure structure of solids glass and ceramics environmental chemistry and control of environmental pollution green chemistry for clean technology waste management etc the book is sincerely offered to students and teaching fraternities associated with engineering chemistry from various engineering and technological institutions all over the country

any good text book particularly that in the fast changing fields such as engineering technology is not only expected to cater to the current curricular requirments of various institutions but also should provided a glimpse towards the latest developments in the concerned subject and the relevant disciplines it should guide the periodic review and updating of the curriculum

software tools are a great aid to process engineers but too much dependence on such tools can often lead to inappropriate and suboptimal designs reliance on software is also a hindrance without a firm understanding of the principles underlying its operation since users are still responsible for devising the design in process engineering and design using visual basic arun k datta provides a unique and versatile suite of programs along with simultaneous development of the underlying concepts principles and mathematics each chapter details the theory and techniques that provide the basis for design and engineering software and then showcases the development and utility of programs developed using the material outlined in the chapter this all inclusive guide works systematically from basic mathematics to fluid mechanics separators overpressure protection and glycol dehydration providing basic design guidelines based on international codes worked examples demonstrate the utility of each program while the author also explains problems and limitations associated with the simulations after reading this book you will be able to immediately put these programs into action and have total confidence in the result regardless of your level of experience companion visual basic and excel files are available for download on under the downloads updates tab on this web page

glencoe world history a comprehensive course that covers prehistory to the present day helps link the events of the past with the issues that confront students today it motivates and engages students in meaningful learning as they develop an understanding of the world s cultures and an appreciation for the interdependence of world regions features respected authorship written by an unparalleled author team that includes the world renowned national geographic society this program is characterized by a consistently riveting narrative flow special features contributed by the national geographic engage every student and encourage even more reading the national geographic society created the map program for glencoe world history clear concise and accurate the maps make the connection between geography and history reading

support glencoe world history contains more reading support than any other world history program glencoe authors editors and reading specialists have created a unique content reading strategy that includes prior knowledge activators and graphic organizers in every lesson and in text reading checks to monitor ongoing comprehension new reading essentials and study guide contains the entire text rewritten at a lower reading level combined with the world history audio program the guide is a powerful reading tool for reluctant readers

this book subtitled the chemistry of initiation of non ringed compounds monomers is the second volume vol ii of the book titled the new frontiers in sciences engineering and the arts for a compound to undergo initiation it must be such that has what is called activation center s wherein there are three kinds of many types when such compounds are activated they can be made to undergo either polymeric or chemical reactions when made to undergo polymeric reactions the compounds are said to be addition monomers it is only when the initiation step is favoured by the monomer using an initiator that the propagation step begins just as when a child is born into our world the child begins to grow if the initiation step is not favoured due to presence of what are called transfer species then chemical reactions take place to give non polymeric products under equilibrium mechanism conditions there are different kinds and types of transfer species they are so important to the point where they indeed embrace the first law in chemistry that which has been called the law of conservation of transfer of transfer species almost analogous to the conservation laws in engineering based on this law so many new concepts too countless to list were identified how some compounds monomers rearrange to give other compounds monomers via different kinds of phenomena all new to present day science have been identified so also are the concepts of resonance stabilization which was thought to take place chargedly something very impossible there are also many monomers which present day science activate chargedly things all found to be impossible indeed as has been said all chemical reactions take place only radically while only some polymeric reactions take place chargedly in view of the types of mechanisms involved different families of compounds monomers with activation centers both known and unknown olefinic and non olefinic were considered providing their chemical behaviours under different operating conditions based on the new science unlike what is known in present day science there are males called electrophiles and females called nucleophiles compounds monomers indeed more of females than males while males carry at least two different types of activation centers cumulatively or conjugatedly placed females carry one two or more same types of activation centers how these monomers all coming from different family trees favour the routes favoured by them have been shown even to the point where some which could not be polymerized by present day science can now be polymerized for the first time one has shown what the hydrocarbon family tree looks like in view of the absence of hetero atoms in the tree there are no males for those that carry activation centers for the first time azo compounds including hydrocarbons have been renamed and reclassified how they decompose when catalyzed and non catalyzed have begun to be shown they are important because from there one began to distinguish between surface and laboratory or industrial chemistry for the first time one showed how membranes can be obtained from chitins so also one has shown how the oxidation

of ortho xylene which present day science thought was also combustion to give phthalic anhydride using vanadium pentoxide takes place from all indications a new science has emerged

this flexible and reader friendly program takes students on a comprehensive tour of every facet of electronic commerce they ll learn about success stories work through hands on e commerce projects and discover how to use their skills in reading writing science and math to resolve e commerce questions

in the third edition of fundraising for sport and athletics author richard leonard expands upon the foundation of fundraising offered in previous editions with advanced strategies updated fundraising program examples and additional scholarly support of the administrative concepts

a concise handbook of mathematics physics and engineering sciences takes a practical approach to the basic notions formulas equations problems theorems methods and laws that most frequently occur in scientific and engineering applications and university education the authors pay special attention to issues that many engineers and students
