abstract intermediate algebra is often a gateway course that students are mandated to take in order for them to enter various areas of study
mejia rodriguez and johnson found that 56 of california community college students who began a developmental math

sequence did not complete it this thesis explored how students at a small urban suburban community college in southern california attempted to make it through one semester in an intermediate algebra classroom over a period of two months in spring 2018 i utilized a case study approach which included participant observation interviews and surveys to investigate the perspectives and practices of one instructor and five 5 students in a class that consisted of 34 students drawing from a figured worlds framework i found that the instructor required what i conceptualize as a proactive systematic reactivity outside of class which most students found themselves unable to attain i found that most students were novices who were already positioned at the periphery within the field of mathematics and relied upon an approach i refer to as improvisational reactivity three different themes emerged in the analysis of the students data 1 passive participation with peers and the instructor 2 a passive use of course materials combined with a proactive use of the internet and 3 challenges with making self assessments the thesis concludes with recommendations for addressing these issues
