the point of departure in the present book is that the decision makers involved in the evaluation of alternatives under conflicting criteria express their preferential judgement by estimating ratios of subjective values or differences of the corresponding logarithms the so called grades three mcda methods are studied in detail the simple multi attribute rating technique smart as well as the additive and the multiplicative ahp both pairwise comparison methods which do not suffer from the well known shortcomings of the original analytic hierarchy process context related preference modelling on the basis of psycho physical research in visual perception and motor skills is extensively discussed in the introductory chapters thereafter many extensions of the ideas are presented via case studies in university administration health care environmental assessment budget allocation

and energy planning at the national and the european level the issues under consideration are group decision making with inhomogeneous power distributions the search for a compromise solution resource allocation and fair distributions scenario analysis in long term planning conflict analysis via the pairwise comparison of concessions and multi objective optimization the final chapters are devoted to the fortunes of mcda in the hands of its designers the research started in the late seventies when i got involved in three different problems the nomination procedures in a university the evaluation of alternative energy research proposals and the evaluation of non linear programming software

this unique book presents decision analysis in the context of mathematical modeling and game theory the author emphasizes and focuses on the model formulation and modeling building skills required for decision analysis as well as the technology to support the analysis the primary objective of decision analysis through modeling and game theory is illustrative in nature it sets the tone through the introduction to mathematical modeling the text provides a process for formally thinking about the problem and illustrates many scenarios and illustrative examples these techniques and this approach center on the fact a decision makers at all levels must be exposed to the tools and techniques available to help them in the decision process b decision makers as well as analysts need to have and use technology to assist in the entire analysis process c the interpretation and explanation of the results are crucial to understanding the strengths and limitations of modeling and d the interpretation and use of sensitivity analysis is essential the book begins with a look at decision making methods including probability and statistics methods under risk of uncertainty it moves to linear programming and multi attribute decision making methods with a discussion of weighting methods game theory is introduced through conflict games and zero sum or constant sum games nash equilibriums are next followed by utility theory

evolutionary stable strategies lead to nash arbitration and cooperation methods and n person methods presented for both total and partial conflict games several real life examples and case studies using game theory are used throughout this book would be best used for a senior level course in mathematics operations research or graduate level courses or decision modeling courses offered in business schools the book will be of interest to departments offering mathematical modeling courses with any emphasis on modeling for decision making

whether your course emphasizes business public policy or personal decision making the balanced coverage offered in this text gives your students the analytical skill essential to any management decision process featuring student friendly writing this brief noncalculus based text is an invaluable resource for students from a wide variety of backgrounds andrew golub employs the rational method of decision making as an analytical framework techniques derived from economics probability and cognitive psychology are presented as part of a step by step approach to making good decisions

programme evaluation covers a wide range of decision making activities from problem conceptualization through to integration of information in addition the results of evaluation activities are closely connected with the need to make decisions and formulate policy this book shows how decision analysis can be used as part of the process of need assessment outcome evaluation and policy analysis

policy analysis by design examines the approaches to public policy taken by those who try to teach it write about it and influence it through major analysis bobrow and dryzek systematically compare the five major contending analytical frames of reference welfare economics public choice social structure information processing and political philosophy the

workings of each frame are illustrated by means of a common if imaginary policy case air pollution in the hypothetical smoke valley

a powerful defense of original jurisprudence
