problems and solutions in structural geology and tectonics volume 5 in the series developments in structural geology and tectonics presents students researchers and practitioners with an all new set of problems and solutions that structural geologists and tectonics researchers commonly face topics covered include ductile deformation such as strain analyses brittle deformation such as rock fracturing brittle ductile deformation collisional and shortening tectonics thrust related exercises rift and extensional tectonics strike slip tectonics and cross section balancing exercises the book provides a how to guide for students of structural geology and geologists working in the oil gas and mining industries provides practical solutions to industry related issues such as well bore stability allows for self study and includes background information and explanation of research and industry jargon includes full color diagrams to explain 3d issues

a modern quantitative approach to structural geology and tectonics for advanced students and researchers

when author george davis conceptualized the cover illustration for the first edition of structural geology of rocks and regions he wanted to emphasize that the human adventure of learning comes from doing and that new insight springs from careful detailed examination of field relationships viewed at all scales from rocks to regions he asked illustrator david fisher to combine four photos into the single painting you see here the geologist is enveloped by challenging structural relationships of folded rocks in outcrop the curvature of back and neck torqued as eyes and brain move closer and closer to clipboard is the classic language of geologic mapping when george davis and new co author steve reynolds contemplated the cover illustration for the second edition of structural geology of rocks and regions they asked who else is in the picture stepping back and handing david fisher a couple of additional photos the scene suddenly changed the original geologist who had been sitting on the outcrop recording data is now up and walking around gathering new data a second geologist has moved into the new foreground mapping and sketching a system of small scale imbricate faults again

the head is torqued to handle the requirements of fine description and careful mapping like so many structural geologists she seems to thrive on visualization of three dimensional relationships

structural geology includes features of and overlaps with facets of geomorphology metamorphism and geotechnical studies by studying the three dimensional structure of rocks and regions inferences on tectonic history past geological environments and deformation events can be made these can be fixed in time using stratigraphical controls as well as geochronology to determine when the structural features formed this book provides leading edge research on this field from around the world
