this text is designed for students who wish to explore in depth questions about how

on earth we ought to live e.g. how we can behave responsibly toward nonhumans and toward the planet although primarily oriented toward questions of ethics broadly understood and approached philosophically the volume crosses disciplinary boundaries and attends seriously to economic reasoning and its implications for environmental policy issues it seeks to extract for critical attention the relevant moral or normative presuppositions which lie behind policy recommendations whether they are ones made by biologists ecologists economists philosophers engineers public officials or anyone concerned with policy decisions

the motivation of this research paper is to shed light upon the political economy factors that determine the quality of governance for poverty alleviation policies this issue is a crucial one because although remarkable strides have been made in some parts of the world more than 2.8 billion people live on less than \$2 a day the situation begs the important question why have poverty alleviation efforts by developing countries not achieved the momentum necessary to improve the living standards of poor an important reason why growth with significant redistribution has not occurred in many developing countries is that poverty reduction strategies have often been politically naive the literature spawned by major development institutions until the 1980s did not go beyond policy prescriptions to ask under what political conditions redistributive policies could be successfully adopted this is a relevant issue because policies reflect concrete political and social interests and it is not hard to imagine a situation where poverty alleviating reform is hindered by vested interests the aim of this research paper is to shed light upon the factors determining quality of governance because poor governance is but a manifestation of these deep rooted institutional and political biases against the collective interests of the poor

in this provocative and readable volume eleven leading constitutional authorities challenge business as usual in American foreign policymaking for far too long they contend Americans have acquiesced to presidential claims to sweeping executive powers in foreign affairs thanks to imperial minded presidents a weak willed congress and neglectful scholars these authors forcefully argue that the president is not the supreme crafter of foreign policy and that congress must provide more than a rubber stamp for the president's agenda unilateral presidential control of foreign relations they warn can pose a grave threat to our nation's welfare and is simply without constitutional warrant combining constitutional theory with keen historical insights these authors illuminate the roots of presidential abuse of executive power and remind us of the past and potential costs of such disregard for our unique

system of checks and balances an essential guide for all concerned citizens and members of congress this volume should help revive a proper understanding of this crucial dimension of american democracy
