McConnell and Brue's *Microeconomics: Principles, Problems, and Policies* is the leading principles of economics textbook because it is innovative and teaches students in a clear, unbiased way. The 17th edition builds upon the tradition of leadership by sticking to 3 main goals: help the beginning student master the principles essential for understanding the economy, address problem-specific economic issues, and the policy alternatives help the student understand and apply the economic perspective and reason accurately and objectively about economic matters and promote a lasting student interest in economics and the economy.

The dominant economic explanations of the 20th century are not comprehensive enough to describe the complexity of the economy and society and their reliance on the biosphere. Intangible flow theory in economics, human participation in economic and societal production, outlines a new theory that challenges both economics and the relativism conveyed in social constructivism, poststructuralism, and postmodernism to mainstream economics and Marxism. Monetary flows transform us humans into commodities. This new theory flows of economic elements as physical goods or money are consummated by intangible flows that cannot yet be precisely appraised at an actual or approximate value. For instance, workflows, service flows, information flows, or communicational flows. The theory suggests a systematic alternative to refute the human commodity framework and interrelated conjectures, e.g., human capital, human resources, human assets. Furthermore, it exhibits that economic and societal production is fully integrated on the biosphere. Conversely, contemporary relativism argues for the end of theory development, suspension of evidence, and entrenchment of knowledge validity among local systems named as paradigms, epistemes, research programs, truth regimes, or other terms. Thus, relativism tacitly supports dominant theories as the human commodity framework because it preventively sabotages the creation of new theoretical explanations. Disputing relativist theses, intangible flow theory demonstrates that innovative theoretical explanations remain possible. This book is of significant interest to students and scholars of political economy, economic sociology, organization, economics, and social theory.

The 33 papers presented in this book were selected from amongst the 97 papers presented during the sixth edition of the international conference on integrated design and manufacturing in mechanical engineering during 28 sessions. Two keynote papers: one presented by Professor Stephen Lu from the Impact Research Laboratory, University of Southern California, USA, on supporting participative joint decisions in integrated design and manufacturing teams, and one written by Professor Stefan Rudolph from Stuttgart University about know-how reuse in the conceptual design phase of complex engineering products. Or are you still constructing manually or do you generate already automatically? Introduce the subject of the conference and are followed by the different themes highlighted during the conference: the design/manufacturing interface, integrated design of manufacturing processes, life cycle design and manufacturing approaches, agility in design and manufacture, knowledge in engineering and management in production systems.
