this book contains the lectures of the second course devoted to bioelectro chemistry held within the framework of the international school of biophysics in this course another very large field of bioelectrochemistry i e the field of membrane phenomena was considered which itself consists of several different but yet related subfields here again it can be easily stated that it is impossible to give a complete and detailed picture of all membrane phenomena of biological interest in a short course of about one and half week therefore the same philosophy as the one of the first course was followed to select a series of lectures at postgraduate level giving a synthesis of several membrane phenomena chosen among the most important ones these lectures should show the large variety of membrane regulated events occurring in living bodies and serve as sound interdisciplinary basis to start a specialized study of biological phenomena for which the investigation using the dual approach physico chemical and biological is unavoidable since as already mentioned it was impossible to exhaust even roughly in a short course like this the presentation and introductory treatment of the extremely large variety of membrane phenomena it can be expected that the third course will continue the subject of membrane phenomena deepening some ones presented in this course and introducing some new ones vii contents symbols and acronyms ix opening address g milazzo 1 structure of biological membranes and of their models i j a hayward et al

understanding of biological nitrogen fixation has advanced with impressive rapidity during the last decade as befits a developing area of science these advances have uncovered information and raised questions which will have and indeed have had repercussions in numerous other branches of science and its applications this information explosion to use one of today's cant idioms was initiated by the discovery by a group of scientists working in the central research laboratories of dupont de nemours u s a of a reproducibly active cell free enzyme

preparation from a nitrogen fixing bacterium full credit is due to them but subsequent developments albeit sometimes quite as impressive have too often been marked by that familiar disorder of a developing field of research the scramble to publish it is a scramble which at its best may represent a laudable desire to inform colleagues of the latest developments yet which too easily develops into an undignified rush for priority wherewith to impress one's board of directors or grant giving institution this in miniature is the tragedy of scientific research to day desire for credit causes research to be published in little bulletins notes and preliminary communications so that only those intimately involved in the field really know what is happening and even they may well not see the forest for the trees those outside the field or working in peripheral areas may glean something of what is going on from reviews and fragments presented at meetings but the broad pattern of development is often elusive

this is the first course devoted to bioelectrochemistry held within the frame work of the international school of biophysics although this branch of scientific research is already about two centuries old as a truly independent one it has been in a stage of lively development since only a few decades ago and this is why a first course at the e majorana center was devoted to it since bioelectrochemistry consists of many sub fields it is impossible to include even superficially all of them in a short course lasting just a week and therefore the chapter of redox reactions was chosen for this first course as being most general in character but even restricting the course to redox reactions only a few subjects could be included and therefore the choice among them was made considering the most general guidelines that could serve as a basis for the further study of individual problems in this way we hope to give a sound basis to the study of and to stimulate further interest in this branch of both biological and physical chemistry this dual interdisciplinary approach is on the other hand unavoidable if a more rigorous and logical attack on biological problems in living bodies is to be carried ahead vii contents ix symbols and acronyms opening address a borsellino 1 bioelectrochemistry and bioenergetics an interdisciplinary survey g milazzo 5 general criteria for the fulfilment of redox reactions r buvet 15 photosynthesis selected topics h

the structure function and reactions of nucleic acids are central to molecular biology and are crucial for the understanding of complex biological processes involved revised and updated nucleic acids in chemistry and biology 3rd edition discusses in detail both the chemistry and biology of nucleic acids and brings rna into parity with dna written by leading experts with extensive teaching experience this new edition provides some updated and expanded coverage of nucleic acid chemistry reactions and interactions with proteins and drugs a brief history of
