this book delves into the urban planning theory of smart growth to encourage the creation of smart cities where compact urban spaces are optimized to create transit oriented pedestrian and bicycle friendly areas with a clear focus on developing a sustainable humanistic transport system over the last century increased demographic changes and use of motor vehicles in the wake of urbanization led to the rapid expansion of cities giving rise to economic social and environmental problems sprawls and extension into natural areas caused a scattered urban context replete with empty spaces this book provides an effective solution to this with an overview of the historical application of smart growth principles as a response to the issue of sprawling cityscapes and sheds light on the theoretical information and methodologies used by cities to re develop the urban landscape it also encloses a checklist for practitioners and

decision makers to inform the developmental process and integrate smart growth strategies into land use planning this book effectively engages with the global problem of urban sprawl in cities and hence will be an asset to both urban planning professionals and graduate and postgraduate students of urban studies and the related disciplines

this is consistent with a substantial body of economic theory albeit not conventional neoclassical economics which frequently treats transit as a special case this conflict is linked to faulty assumptions underlying neoclassical economic theory
